

Movecraft

- Decentralized craft based on Bitcoin Staking
- Staking Bitcoin to earn elements for the aw games!

LeeDuckgo

Why is Bitcoin Staking necessary for AW?

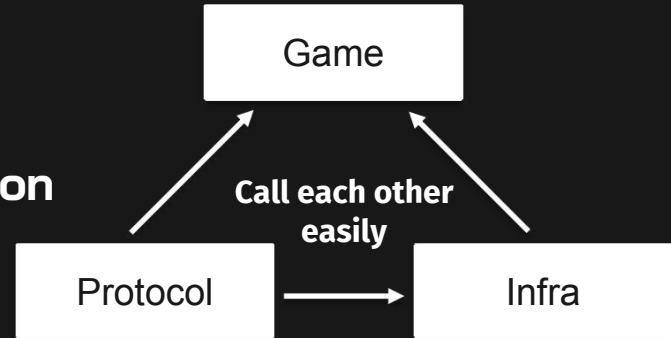

*"TVL(Total Value Locked) is more important indicator in AW.
Rather than the user numbers"*

- **Buidl on Bitcoin-L2 to enable Staking**
- **Staking to earn - Idle gameplay naturally has the crypto core**

Why is Move the best soil for AW?

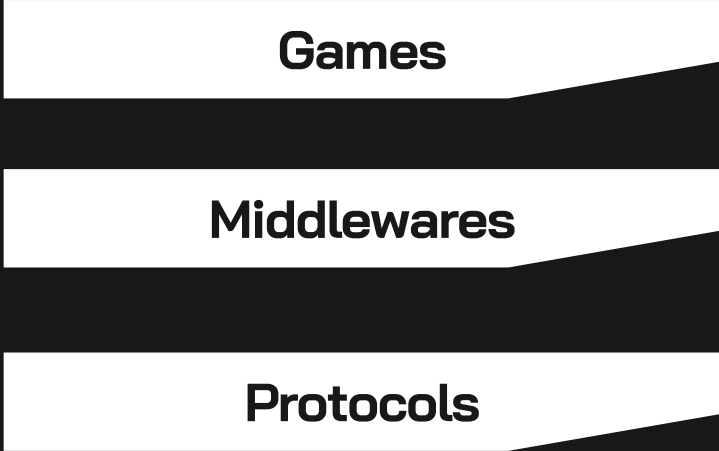

"The potential of the Move language has not yet been fully tapped by full-chain game project developers."

- Composability of Rooch Smart Contracts
- Features, such as Upgradeability, Key rotation

Bitcoin Staking + MoveVM = *AW which will be working!*

Move Game Kit Architecture

The diagram illustrates the Move Game Kit Architecture as a stack of three layers. Each layer is represented by a white rectangular box with a black border and a black shadow, giving it a 3D appearance. The layers are stacked vertically, with 'Games' at the top, 'Middlewares' in the middle, and 'Protocols' at the bottom. The right side of each box is tapered, creating a wedge-like shape. The text within each box is in a bold, black, sans-serif font.

Games

Middlewares

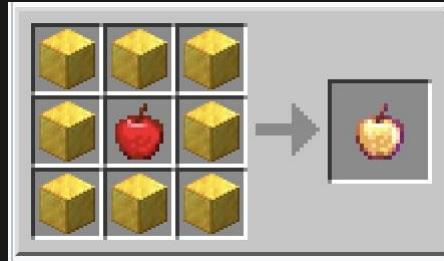

Protocols

**Allows protocol developers,
Artists, and game developers
to things they are good at.**

Movecraft

Traditional Craft (Centralized Games)

- Elements in one game
- Centralized synthesis recipe
- Isolated players for each game

Movecraft (Decentralized Craft)

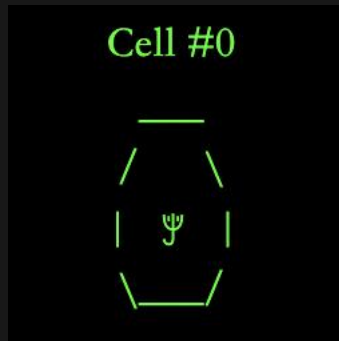

- Elements (Cell NFT) across games
- Decentralized synthesis recipe
- Shared user pool for ecosystem

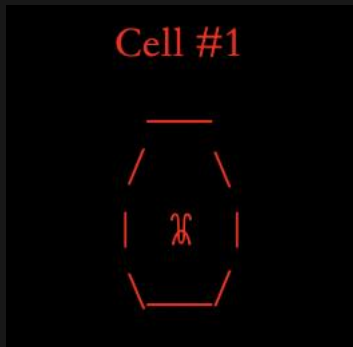

Minecraft - Elements to GAME NFT by Recipe Book
